# Precision multiple position switch BNS 819-... <br> Models 100, 62, 61 

EU Directive 2004/108/EC (EMC Directive) and EMC Law
2006/95/EC Low-Voltage Directive
Low-voltage switching devices: EN 61947-5-1:2004

## Scope

This guide is valid for the following products:

- BNS 819-D-...-100-10-... (model 100)
- BNS 819-D-...-62-10-... (model 62)
- BNS 819-D-...-61-...-10-... (model 61)

Model 100 to DIN 43697
Example BNS 819-D06-100-10-...

Model 62
Example BNS 819-D04-62-10-...

Model 61
Example BNS 819-D04-61-12-10-...

## Intended Use

Precision multiple position switches are designed to transmit commands to automatic controllers for positioning and switching off machines and industrial plants

Ignoring the instructions in this guide, especially those related to assembly, as well as improper use and incorrectly performed functional checks will forfeit any warranty and liability claims made against the manufacturer.

## Improper Use

Multiple position switches BNS 819-... with the BS 30.0 switch element (without forced opening) must not be installed in safety circuits.

Multiple position switches may not be used as limit stops.

## General safety notes

Installation and startup are only to be performed by trained specialists.

The operator is responsible for ensuring that local safety regulations are observed. In particular, the operator must take measures to ensure that a defect in the devices will not result in hazards to persons or equipment.

If defects and persistent faults occur in the devices, take them out of service and secure against unauthorized use.

## Construction and Function

Multiple position switches are fitted with 2 to 16 switch devices arranged in series. The switch elements are actuated by plungers, which are triggered by cams attached to the machine.
The plungers and cams may vary depending on the operating conditions.

## Installation

Install multiple position switches in such a way that

- moving machine parts do not damage connecting cables and connectors,
- the seal on the multiple position switch is tight when the cable is inserted.

Note: To ensure the switching function, the dimension $5_{-0.5}$ is especially critical.

## Electrical connection

1. Open the switch cover.
2. Connect the cable to the switch elements as indicated on the circuit diagram.
Use a suitable cable gland or connector with O-ring. The seal must be adapted to the diameter of the cable in order to seal the cable properly.
Tighten the connecting screws on the switch element to max. 0.5 Nm .
3. Place the switch cover in position and tighten the cover screws with 1.5 Nm .

BSE 30.0

## Function check

- Check the switch function by actuating the plunger axially.
- Test the wiring and electrical functions using appropriate testing equipment.

## Maintenance and checks

No maintenance work required. Perform the following checks regularly to ensure correct functioning:

- Switch function of the elements
- Correct seating of all components and connections
- Tight seal on cable gland
- Deposits on switch
- Wear on plunger and cam
- Precise adjustment of cam in relation to multiple limit switch

Technical Data

| Mechanical Data |  |
| :---: | :---: |
| Housing material | Anodized aluminum |
| Mounting type | any |
| Connection type | M $25 \times 1.5$ |
| Ambient temperature | $-5 \ldots+85^{\circ} \mathrm{C}$ |
| $\begin{aligned} & \text { Degree of protection as per IEC } \\ & 60529 \end{aligned}$ | IP 67 |
| Function indicator, type FD | $6 . .60 \mathrm{~V} \mathrm{AC/DC}$ |
| Function indicator, type FE | 90... 250 V AC/DC |
| Switch element | BSE 30.0 |
| Contact system | Dual changeover, one normally open and one normally closed, galvanically isolated. |
| Wire cross-section | $2 \times 1.5 \mathrm{~mm}^{2}$ |
| Nominal voltage | 240 V AC |
| Conv. thermic current $\mathrm{I}_{\text {th }}$ | 6 A |
| Rated impulse dielectric strength | 2.5 kV |
| Assured separation after plunger travel | No |
| Connection type | M3 screw connection |
| Switching actuating force | min. 20 N |
| Switching point to reference surface | 6 mm |
| Plunger point to reference surface | 8 mm |
| Switching frequency | max. 300 rpm |
| Switching operations | $30 \times 10^{6}$ |
| plungers |  |
| Plunger style | Chisel (D), ball (K), roller (R), roller bearing (L), <br> chisel with wiper plate (E) |
| Plunger material | Steel, stainless, hardened |
| Max. plunger travel with BSE 30.0 <br> Plunger type D, K, R, L <br> Plunger type E | depending on plunger type 5.5 mm 4 mm |
| Operating speed with BSE 30.0 <br> Plunger D <br> Plunger E <br> Plunger K <br> Plunger R <br> Plunger L | depending on plunger type $40 \mathrm{~m} / \mathrm{min}$ <br> $30 \mathrm{~m} / \mathrm{min}$ $10 \mathrm{~m} / \mathrm{min}$ $60 \mathrm{~m} / \mathrm{min}$ $120 \mathrm{~m} / \mathrm{min}$ |
